

Secure File Transfer Protocol (referred to as the “SFTP ” hereunder)

SFTP enables the issuers/master agents to transfer data over a secure shell (ssh) data stream. It helps in ensuring that the data is transferred with security, efficiency and privacy. This service was highly appreciated by the issuers/master agents since October 2018.

As at the end of December 2019, there were 27 ,213 offshore structured notes issued and traded in Taiwan financial market. From October 2018 to December 2019, UBS and Societe Generale, the top two issuers, has issued over 3,107 offshore structured notes and completed over 0.4 million data filing through the very secured SFTP.
